Zadanie 1

Utwórz funkcję, która zwróci liczbę pracowników zatrudnionych na określonym stanowisku w określonym dziale w określonym kraju. Nazwa stanowiska, nazwa działu i nazwa kraju są przekazywane do funkcji jako parametry. Wywołaj funkcję z parametrami Sales Manager, Sales i United Kingdom.

PostgreSQL

```
CREATE OR REPLACE FUNCTION count_employees(  
    job_title_fun VARCHAR(35),  
    department_name_fun VARCHAR(30),  
    country_name_fun VARCHAR(40)  
) RETURNS INTEGER AS $$  
BEGIN  
    RETURN (  
        SELECT COUNT(e.employee_id)  
        FROM employees e  
        JOIN jobs j ON e.job_id = j.job_id  
        JOIN departments d ON e.department_id = d.department_id  
        JOIN locations l ON d.location_id = l.location_id  
        JOIN countries c ON l.country_id = c.country_id  
        WHERE j.job_title = job_title_fun  
        AND d.department_name = department_name_fun  
        AND c.country_name = country_name_fun  
    );  
END;  
$$ LANGUAGE plpgsql;  
  
SELECT count_employees('Sales Manager', 'Sales', 'United Kingdom');
```

    RETURN @employeeCount;
END

SELECT dbo.func('Sales Manager', 'Sales', 'United Kingdom') AS Employees

```

Results		Messages	
	Employees		
1	5		

Zadanie 2

Utwórz wyzwalacz, który przy zmianie stanowiska danego pracownika:

- zaktualizuje jego datę zatrudnienia w tabeli employees na dzień jutrzejszy,
- zarchiwizuje dane o jego poprzednim stanowisku, tzn. doda odpowiednie informacje do tabeli job_history i ustawi datę końcową na dzień dzisiejszy,
- sprawdzi, czy jego aktualne wynagrodzenie należy do zdefiniowanego przedziału wartości wynagrodzeń dla jego nowego stanowiska. Jeżeli jego aktualne wynagrodzenie jest niższe niż minimalna wartość przedziału, to zostanie zaktualizowane do tejże wartości. Dodatkowo zostanie wypisana informacja o imieniu i nazwisku pracownika oraz kwocie jego podwyżki (różnicy pomiędzy nową i starą kwotą wynagrodzenia). Jeżeli jego aktualne wynagrodzenie jest wyższe niż maksymalna wartość przedziału, to maksymalne wynagrodzenie dla jego nowego stanowiska zostanie zaktualizowane do wartości jego aktualnego wynagrodzenia. Potwierdź działanie dla wszystkich przypadków testowych. *Uwaga!* Wyzwalacz powinien pracować także przy zmianie stanowiska dla wielu pracowników jednocześnie.

PostgreSQL

```

CREATE OR REPLACE FUNCTION trigger_employee_job_change()

Zadanie 3

Utwórz procedurę, która zmieni stanowisko na podane u pracowników zatrudnionych na określonym stanowisku w określonym kraju i poprzez parametr wyjściowy zwróci liczbę zmodyfikowanych rekordów oraz wyświetli id, imię, nazwisko i nazwę departamentu pracowników, których stanowisko zostało zmienione. Dodatkowo wypisze informacje o wszystkich departamentach z danego kraju razem z listą ich pracowników (id, imię i nazwisko), których stanowisko zostało zmienione. Jeżeli w jakimś departamencie w danym kraju nie pracuje żaden pracownik na danym stanowisku, wywoła jak najwyższy priorytetowo komunikat, który nie przerwie wykonywania kodu i wypisze: "Brak pracowników na stanowisku X w departamencie Y w kraju Z!", gdzie X jest nazwą poprzedniego stanowiska, Y jest nazwą aktualnie sprawdzanego departamentu, Z jest nazwą podanego kraju. Procedura ma także weryfikować podane dane. Jeżeli podany kraj nie istnieje, wywoła wyjątek, który przerwie wykonywanie kodu i wypisze: "Brak kraju X!", gdzie X to nazwa podanego kraju. Jeżeli w podanym kraju nie ma żadnego departamentu, wywoła wyjątek, który przerwie wykonywanie kodu i wypisze: "Brak departamentów w kraju X!", gdzie X to nazwa podanego kraju. Jeżeli w podanym kraju nie pracuje żaden pracownik, wywoła wyjątek, który przerwie wykonywanie kodu i wypisze: "Brak pracowników zatrudnionych w kraju X!", gdzie X to nazwa podanego kraju. W swoim rozwiązaniu wykorzystaj funkcję z zadania 1 oraz wyzwalacz z zadania 2. Wywołaj procedurę z nazwami stanowisk Sales Manager i Sales Representative oraz odpowiednią nazwą kraju, żeby przetestować wszystkie możliwe przypadki.
